

Gives more and takes less.

Tanimura & Antle Living Lettuce is hydroponically grown year-round using regenerative farming practices that help sustain and protect our environment. Our state-of-the-art greenhouses use Earth's energy to naturally warm and cool this innovative growing environment, reducing dependency on limited resources.

We grow and ship Living Lettuce regionally resulting in less food miles, and the freshest product possible. Our 100% recyclable eco-friendly packaging protects the lettuce and offers effective merchandising solutions.

Grown on water, Living Lettuce is harvested and packaged with the roots intact for optimal freshness and shelf life. Giving more and taking less, Living Lettuce meets consumer demand for unique, fresh and sustainable products.
